The history, capabilities and people it takes to excel

www.mtdtube.com

Glen Blocher, a pioneer in the tube end forming industry, founded Manchester Tool & Die in 1960 as a job shop. By the mid-1960's he built MTD's first tube end forming machine. By the end of that decade he had developed superior technology that would soon establish MTD as a leader in the field – a position still held today.

To maintain our leadership position, over the years MTD has expanded and reinvested in capabilities, facilities and people. We now occupy a 65,000 square foot facility with over 50,000 square feet devoted to manufacturing.

Our CNC, grinding and machine assembly departments, as well as our tooling development lab, are positioned to provide maximum output while ensuring the highest quality levels possible. Prototyping, low-to-high-volume production machining and steel fabricating services are also available. If you plan to be in the North Manchester, Indiana area, please call us and arrange a tour of our facility so you can see our equipment, our quality systems and our people in action.
